

Top Rail Tie (V-TRT)

STRENGTHEN AND EXTEND THE LIFE OF YOUR 5" FENCE POSTS

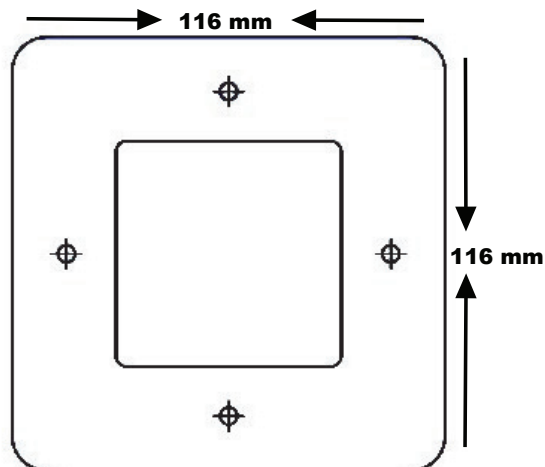

We know the strength of a vinyl fence comes from a proper installation. Strengthen and extend the life of your fence posts with Top Rail Ties (V-TRT).

The V-TRT is designed to be placed in the post after the top rail has been installed. Once the V-TRT is in place, simply fasten it to the top rail. This system will distribute the "pull" of the rail over the width of the post as opposed to isolating it to a single point as the "Keeper Screw" does.

TOP RAIL TIE METHOD

KEEPER SCREW METHOD

A BETTER PROVEN SOLUTION

Until now installers have used a single screw to secure the top rail, as seen in the photo above. This method known as the "Keeper Screw Method" causes unnecessary stress on the post. This faulty install method can lead to cracking and cause the top rail to come out of the post when the single screw falls out. Stop this destructive, preventative deterioration of your posts and choose V-TRT.

- Prevents top rail from falling out
- No longer have to cut your own top rail tie out of scrap vinyl
- Easy installation
- Only fits 5" vinyl posts
