

Our ADA railing has numerous benefits over the competition. Our railing...

- Has a 1-1/2" O.D. (outside dimension) that meets the Americans with Disabilities Act grasp-ability requirements
- Is very easy to install
- Has been tested, and complied to, requirements within the IRC (International Residential) and IBC (International Building) codes
- Can be mounted to any surface, including vinyl, wood, composites, steel, concrete or aluminum
- Features a unique adjustable internal joiner that accommodates any transition, stair or ramp angle
- Has hidden fasteners, creating an improved look over other available ADA systems
- Is available in black, white, almond, khaki and acorn colors to suit your personal style
- Is made from cast aluminum components that are powder coated to maintain durability and lasting color
- Can be installed in virtually any stair or ramp configuration

Configure your railing to fit any business, condo, restaurant, apartment complex, public facility or private home.

Our railing is extremely customizable, making it easy to add a wheelchair access ramp to your home or business.

Classic white not your thing? Choose from five railing colors to complement your outdoor space.

ADA Railing by LMT

If you're looking for durable ADA compliant handrail, look no further than LMT. This state of the art railing system allows you to create a continuous code handrail on any stair or ramp.

From its ease of configuration to its lasting color, it's no wonder why our handrail is the top choice in the industry.

Cast Aluminum Components

If you're worried about durability and customization, have no fear. LMT ADA railing consists of cast aluminum components that can accommodate any transition, curve, stair or ramp angle.

Each part is finished in a tough powder coating that ensures minimum maintenance and lasting color.

It's All About Angles

6008
Adjustable Joiner

With stairs and ramps, it's all about angles. Our adjustable internal joiner can fit a wide range of angles for tricky stair and ramp transitions.

This unique joiner accommodates angles from 0-90 degrees. Simply cut the rail to the desired length using a miter saw, adjust the joiner to the desired angle, and apply epoxy to hold it in place.
